

**THE FIRST STATISTIC YEARBOOK OF  
THE FRENCH "OBSERVATORY OF GENERAL PRACTICE" – COLLECT 94/95**

*Société Française de médecine générale - Drs CLERC P., MARTINEZ L, MOREL F. (†)*

In 1993 SFMG created a **computerised network** of general practitioners,

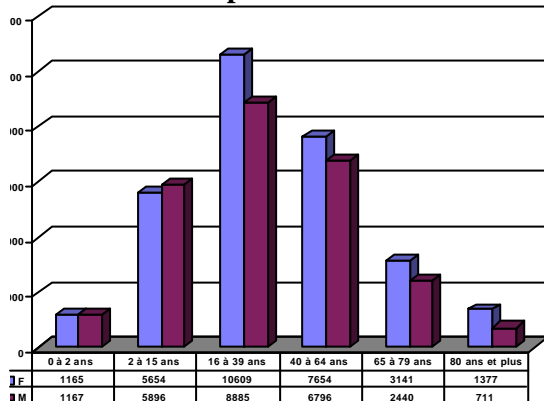

to validate a **"medical consultation's results dictionary"** in general practice, compose of 269 definitions

The validation of the dictionary began in 1993 and finished in 1995, and allowed composing a **medical database**

The exploitation of this database during the year 94/95  
from September 1st 94 to 31 august 95  
allowed a knowledge of the contents of real medical general practice in France

**55 495 different patients** were taken care of.

during **176 123 medical sessions**.

Visits : 18.76% of the sessions

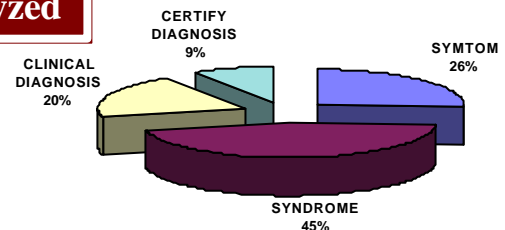

The females represent 53% of the patients and asked 56% of the sessions

The average number of the sessions per patient increased with the age, from 3.63 to 6.32 sessions per year.

**317 080 health problems were analyzed**

The **25 first medical consultation's results**, by decrease order of the sessions, represented **50% of the medical consultation's results recorded**.

| <i>medical consultation's results</i> | <i>Per 100 sessions</i> |
|---------------------------------------|-------------------------|
| High blood pressure                   | 13.68%                  |
| Vaccination                           | 8.35%                   |
| Feverish state                        | 6.13%                   |
| Hyperlipidemia                        | 4.93%                   |
| Insomnia                              | 4.30%                   |
| Systematic Exam                       | 4.24%                   |
| Morbid State without fever            | 3.84%                   |
| Nasopharyngitis                       | 3.35%                   |
| Coronary incapacity                   | 3.34%                   |
| Arthropathis                          | 3.22%                   |
| Lumbago                               | 3.15%                   |
| Diabetes mellitus                     | 2.96%                   |
| Degenerative osteoarthritis           | 2.75%                   |
| Anxiety                               | 2.55%                   |
| Pain                                  | 2.38%                   |
| Depressive mood                       | 2.18%                   |
| Varicose veins                        | 2.03%                   |
| Abdominal complaint                   | 1.98%                   |
| Constipation                          | 1.97%                   |
| Asthenia                              | 1.96%                   |
| Pharyngitis                           | 1.93%                   |
| Heavy legs                            | 1.92%                   |
| Acute Bronchitis                      | 1.84%                   |
| Cough                                 | 1.83%                   |
| Depression                            | 1.82%                   |

The **chronic diseases were slightly more frequent (54%)** than the acute diseases  
The health problems that were **stabilised** represented more of the **third** of the sessions

**the average number of the health problem per patient** taken care of at the current sessions (1.26 to 2.66)
